Technical Memorandum S-4 on
Hydraulic Balance

TECHNICAL MEMORANDUM S-4

March 8, 2013

To	Town of Falmouth, MA		
Copy to	File; Project Team		
From	Nathan C. Weeks, P.E., BCEE J. Jefferson Gregg, P.E., BCEE	Tel	774-470-1633 774-470-1640
Subject	Wastewater and Nutrient Management Services Hydraulic Balance	Job No.	8615097

1. HYDRAULIC BALANCE ON COLLECTION SYSTEM THAT FLOWS TO THE WWTF

This evaluation was completed to compare the metered water use of properties that drain to the collection system with the flows recorded at the collection system pumping stations (PS). The purpose of the evaluation is to identify approximate flows from each pumping station and to identify where inflow and infiltration (I/I) is the greatest problem.

This evaluation utilized the following steps:

- 1 Pumping station flow meter totalized values were collected for Jones Palmer PS, Shivericks Pond PS, and Woods Hole PS. It was noted that the flow meter and totalized readings for Shivericks Pond PS are not believed to be accurate because the flow meter is the old meter from the Woods Hole PS and it has not been accurately calibrated to the satisfaction of operations staff.
- 2 Pump run time records and certified pump curves were collected for Gardiner Road PS, Falmouth Beach PS, and Inner Harbor PS. It is noted that the certified pump curves are not believed to be accurate due to over 20 years of wear on the impellers.
- 3 Water consumption data for all the water accounts for properties that are connected to the collection system were collected and reviewed focusing on the 2011 data.
- 4 A series of Geographic Information System (GIS) maps were developed that illustrated the following items:
 - Properties that are sewerred
 - Properties that have public water supplies
 - Location of the existing collection system with respect to these properties

These maps were developed to identify the properties that are connected to gravity sewer portions of the collection system and drain directly to each of the following areas/PS:

- Area 1: Gardiner Road PS
- Area 2: Woods Hole PS
- Area 3: Falmouth Beach PS
- Area 4: Inner Harbor PS
- Area 5: Shivericks Pond PS

- Area 6: Jones Palmer PS
 - Area 7: High School PS
 - Area 8: Blacksmith Shop Road WWTF
- 5 The maps were reviewed with Amy Lowell, Falmouth Assistant Wastewater Superintendent to identify properties that were not identified correctly and discern possible data anomalies.
- 6 The water consumption data was summed for each area and compared to the pumping station flow meter readings. It is noted that the water consumption data was reduced by ten percent to account for the water that is purchased by each water account but does not flow to the sewer, such as lawn irrigation and outside shower water use (non-potable flows). Also any water services that were labeled (on the data summary received from the Town Data Department) as irrigation or pier wash-down use were subtracted from the sum.

The water balance for calendar year 2011 that resulted from this evaluation is illustrated in Figure 1, and the following findings are noted on the estimated inflow and infiltration to this portion of the collection system:

- The Woods Hole collection system I/I is estimated at 0.077 mgd based on Woods Hole PS flow meter data (0.155 mgd on average) minus modified water consumption¹ data for the properties that drain to this pumping station (0.078 mgd on average).
- The Falmouth Village collection system I/I is estimated at 0.001 mgd based on:
 - Jones Palmer PS flow meter data (0.387 mgd on average) minus
 - Woods Hole PS flow meter data (0.155 mgd on average) minus
 - modified water consumption¹ flow from the Hospital/Ter Huen Road gravity system (0.066 mgd on average) minus
 - modified water consumption¹ flow to the Falmouth Beach PS (0.019 mgd on average) minus
 - modified water consumption¹ flow to the Inner Harbor PS (0.081 mgd on average) minus
 - modified water consumption¹ flow that is collected along Main Street and Village Center areas that flow directly to Shivericks Pond PS (0.065 mgd on average)
- The modified water consumption¹ for the High School was the same value (0.002 mgd) as the high School pumping station average flow. No appreciable I/I was noted at this location based on these values and the relatively small size of the collection system serving this system.

This evaluation confirms previous findings that the Woods Hole collection system is the largest source of I/I.

There is one possible major source of wastewater flow in the Woods Hole area that may not be properly accounted. This source is marine water used by the research facilities in Woods Hole that may be discharged to the sewer. More inquiries should be made to the research facilities on how they treat and discharge their spent marine water.

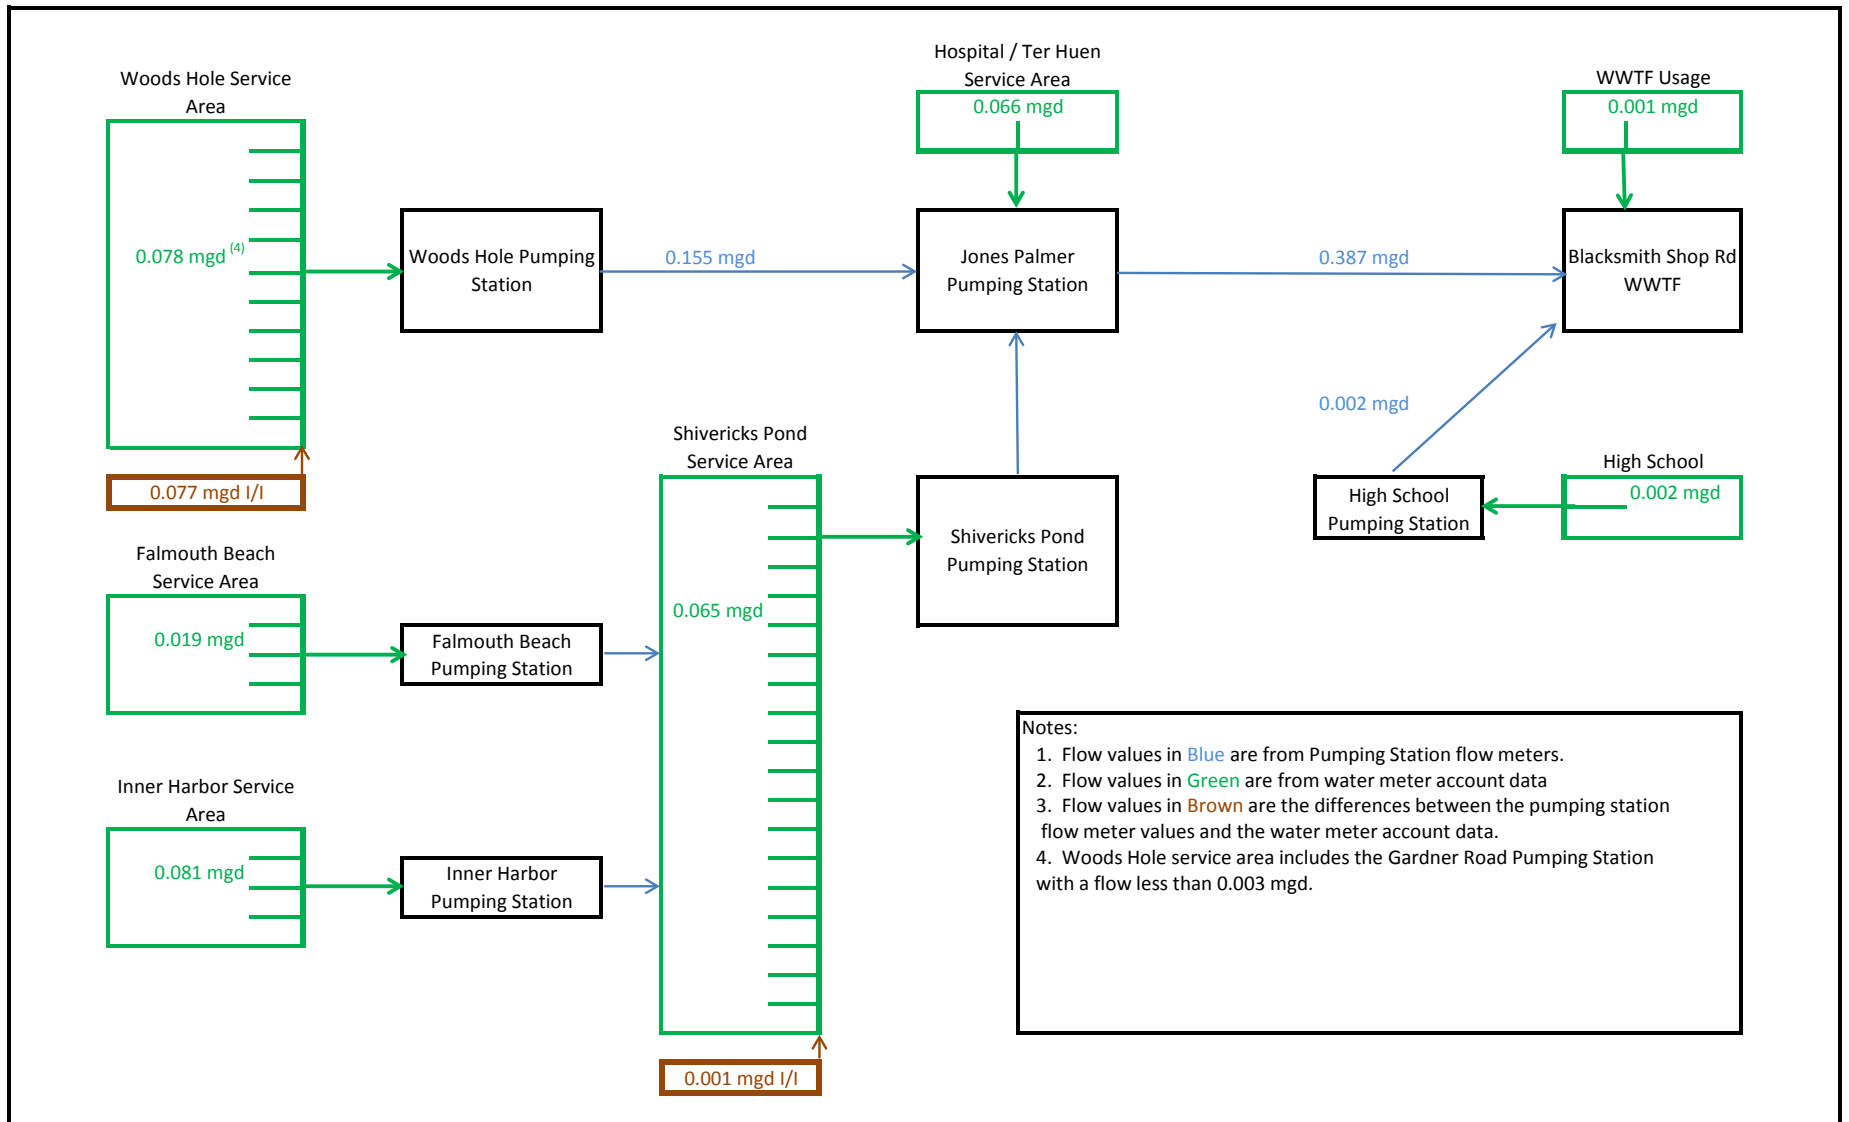

It is noted that there are many assumptions made during this evaluation; not the least of which is the accuracy of the water meters and the pumping station flow meters. Even with the many assumptions, it is noted that this evaluation makes use of the best available information and can be used to prioritize I/I

¹ Water consumption was reduced by ten percent to account for non-potable flows.

TM S-4

remediation. The water account data used in this evaluation is attached in Appendix S-4-1. The flow meter records used in this evaluation are attached in Appendix S-4-2.
